

PHYS 211: Quiz 8

June 4, 2012

1. A car has wheels of radius 0.25m . If it travels a distance of a 100m without slipping, how many rotations does each wheel make. If it took 10s to cover this distance what were the cars average linear speed and the average angular speed of each wheel?

2. Why have we studied what we have until now in this class?
