

# Understanding What We Are Giving

## Augustine Chidera Ubah

Society and Technolgy Residential College

### Introduction

- People have no fear of anything when it comes to technology
- They easily give up their most valuable identity to make their lives easy and convenient
- There are a lot of threat posed by technology.
- We are in Information Age and every information is vital
- Companies are use every means possible to get as many information as possible to be able to predict their customers.

### Purpose

Helping people understand the harm technology poses to them and what companies can do with the information that they gather from us.

### Materials and Methods

- Identify the steps of your research.
- Common subsections may include: Participants/Subjects, Procedures/ Data Analysis
- Make sure to describe your subjects/participants either here or in a subject characteristics table.
- Use bulleted text to make methods easier to read.
- Sometimes a figure, timeline, diagram, or flow chart is easier to describe your data collection process. Make the figure meaningful. Don't forget to include a title or figure caption and label important parts.

### Abstract:

People fear the unknown. It is a natural tendency to be frightened of things we don't understand. But for some reason when it comes to technology, it is different. Technology have made our lives easy and convenient that we are willing to risk anything to keep it. When we allow our cellphone to hold a record of our fingerprint and other important aspect of our identity, we risk it being access easily by the people who know a lot more than we do about technology. Are people going to be a little skeptic when they see the different threats posed to them through technology.

### Results:

### Discussion

- Relate your findings back to critical research: how were the results similar/ different and suggest possible explanations for why.
- Continue to use short, concise sentences or bullet points. Paragraphs of text may be discouraging for readers.
- Focus on practical applications and the implications of your results.
- You may address the limitations to your study and suggest directions for future research at the end of this section.

### Conclusion (s)

People should try to understand the transition of technology as much as possible.
